

## DI Insights

Easy access to information that makes a difference

### New Reports

**State Enrollment Count:** An additional report is now accessible under Enrollment History > All Schools. The 'State Enrollment Count' report returns the CBEDS enrollment counts, school by grade, for the year you select.

**Multi-Region:** In response to user requests, the Demographics page now provides the option to generate a report based on multiple regions. For example, after selecting one elementary attendance area, clicking on the 'Multi-region Select' option, the user can select a second attendance area, and create a report on the aggregate data.

### Meet Stella Doiron . . .

Supporting our clients is a high priority for DecisionInsite. In response, several months ago we asked Stella Escario Doiron to step into the role of Client Relations Manager.

Stella has been working with DecisionInsite from its early days. Several of our clients were introduced to DI by Stella. In her new expanded role, she will be the primary contact between many of our clients and DI. Stella is highly knowledgeable of the full range of DI products and services. She also knows the DI System quite well and has even contributed some of the ideas that became system features—such as our Dynamic Boundary Analysis. She approaches the application from her many years of experience working as a Director of Facilities planning in California school districts.

Together with the rest of the DI team, Stella Doiron is committed to making sure you realize the fullest utilization of DI's many services and system.

### New Features

**Generate Student Mailing Lists:** It is now possible for the District Administrative User to generate student mailing lists on the fly, for any geography, school or grade levels you select. With the new student data you will provide this fall, if you provide names, the mailing list will include names as well as student ID numbers and addresses.

**District Street Directory Files Integrated:** Many school districts maintain a separate street directory file that defines attendance areas. We now have the capacity to integrate this file into our system. Once integrated, these data will provide increased accuracy of student plots, and better performance for the School Locator function. Watch for a special letter coming out soon discussing this and how to forward the data file to us.

**Infrastructure Update Web Form:** To streamline this process for you, we are introducing this year an online web form designed to capture any infrastructure changes for your district. This form is only accessible to the District Admin User login on the 'Admin' menu. Select the 'Infrastructure Update' item, answer the questions germane to your district and click submit at the bottom of the form.
