Easy access to information that makes a difference

Scenarios for Boundary Changes

One of the most acclaimed and sought-after features of the DI system is its capacity to quickly and easily review the effect of possible boundary changes. Whether closing a school, or simply balancing facilities, the DI Tools included in the IDEAS—Premier version for playing ‘what-if’ with possible new boundaries are easy-to-use time-savers. One tool displays a quick look

Often these tools are used as an integral part of the meetings by boundary change committees.

at the 10 year enrollment projections for the boundary you draw on the screen. The other shows the impact your new boundary would have on other schools in the district.

Often these tools are used as an integral part of the meetings by boundary change committees. We can quickly teach you to use the tools, or one of our consultants can facilitate your process. For a peek at how these tools have been used, we invite you to review a couple of recent case studies posted to our website (El Rancho USD & Fontana USD).

DI Celebrates Fifth Year Anniversary!

What began as the dream of a CBO, designed initially at the Elephant Bar, is five years later a growing company serving over fifty school districts in California. On the anniversary of our first five years, DecisionInsite is now expanding beyond California as well. The excitement of our easy-to-use system has become contagious.

We are proud to be helping so many professionals make more informed decisions, and do so in a more cost effective way.

The DecisionInsite Team wishes to thank so many of you who have contributed ideas that are now integrated into the system. We look forward to the next five years and this continued partnership.

Our New Look

A new interface for our system is coming soon! At DecisionInsite, we are committed to keeping up with constantly evolving web-based geographic systems, so that our clients always have a cutting edge tool. Toward that end, we are in the process of rebuilding our map interface from the ground up. It will work even faster, smoother and easier. The Map window will “fill your screen”; the reports you want will be easier to find, and rendering speeds are phenomenal. Watch for further announcements as we launch a test site for clients, release the full product over the next few months, and provide all the support you’ll need to make your transition smooth and easy.

Keeping Track of Involuntary Transfer Students

Ever try to keep track of how those overload students will affect projected enrollment when they return to their home schools? A recently added feature of the DI system allows school districts to earmark those students. By telling us which school students will return to in the next school year, the DI projection calculation will automatically modify the projected enrollment at the elementary schools affected by a student’s return to his or her neighborhood school.
